In comparison with previous films there has been no change in appearance of either lung fields. There is no evidence of active parenchymal disease. Transverse diameter of the heart is 14.0 and the chest is 31.5. This is a cardio thoracic ratio within the limits of normal. On previous film the transverse diameter of the heart measured 14 cms and 13.3 cms. A slight variation of one cm. in the transverse diameter of the heart is not significant. **A** ~~THE~~ minimal change such as this can occur in different stages of respiration or in different phases of the cardiac cycle.

OBSERVATIONS:

A.P. & LATERAL VIEWS OF THE RIGHT ELBOW -

show a rather pronounced lipping of the medial margin of the articular aspect of the ulna with the humerus. Through this lip there is a rarefied line which is quite hazy and does not suggest a recent fracture. The history of recent injury, however, suggests the possibility of a chip fracture and if clinically the tenderness is over this region it should be considered as a recent bony injury superimposed on an old one. No other abnormalities are seen.

INTERPRETATION

1. The result of serological tests should always be interpreted in the light of the clinical evidence. Where such interpretation cannot readily be arrived at, the submission of confirmatory specimens is always advisable.
2. A negative blood Wasserman or Kahn test does not exclude the possibility of syphilis.
3. A case of neuro-syphilis may yield a negative blood Wassermann, but a positive reaction with the spinal fluid.
4. As a routine all specimens of blood serum are subjected to the Standard Kahn and Hinton flocculation tests. If the results are in complete agreement, a report is forwarded. Should the results not be in complete agreement, the specimen is subjected to further tests. This enables the Laboratory to conduct special study in the case of specimens yielding irregular results.
5. The more sensitive flocculation test, such as the Presumptive Kahn, is a valuable aid as an early diagnostic and exclusion test. It must always be borne in mind that this very sensitive test is merely an aid, and should only be considered in conjunction with the other less sensitive tests.
6. In order that the physician may have laboratory aid in connection with the early diagnosis of primary syphilis, the combined dark field outfit has been designed and is ready for distribution, upon request. The early diagnosis of Syphilis can be made in over 90 % of serum-negative primary cases by means of the Dark Field Examination of specimens from chancres and enlarged regional lymph nodes. Physicians are therefore urged to make use of our special combined Specimen Outfit for Dark Field and Blood Examination in Primary Chancre cases.

14. POST-DISCHARGE MAILING ADDRESS:-

31 McKay Ave., London, Ont.

15. BASIS FOR COUNSELLOR'S RECOMMENDATIONS:-

Cavanagh had spent about two years as a nursing orderly prior to entering the army where he performed a similar service. Having commenced on routine labours at a sanatorium he advanced to duties as orderly and later applied to civil service for appointment to a government hospital. He now intends to accept re-instatement to this hospital reinforced by four years army service as an orderly in military hospital.

Although Cavanagh does not think of continuing as a nursing orderly for his life work, he considers it a satisfactory livelihood for the present. Later he conceives the idea of having a grocery shop of his own. As he has had three years' experience as a grocery store clerk, he believes that with a little more experience he could learn enough about the business to operate on his own account. He has no other job ambitions but is capable of unskilled general labour.

Cavanagh is tall, well-built, and easy-going by temperament. He has no rehabilitation problem other than acquiring his own home in a few years' time. He will not touch his Credit till then.

16. ACTION RECOMMENDED:-

1. CLASSIFICATION: Re-instatement
2. RECOMMENDATION: Return to civil service employment as nursing orderly.

OTHER POSSIBILITIES

17. SUGGESTED BY COUNSELLOR:-

Suitable for unskilled or semi-skilled employment in a hospital.
Capable of unskilled general labour.

EXPLANATION OF ITEMS A, B & C

1. The War Service Grants Act, 1944 provides for the payment of the War Service Gratuity for every thirty days of service as follows:—

- (i) \$7.50 in respect of service which is not classed as overseas service.
- (ii) \$15.00 in respect of service classed as overseas service.

By regulation, each person qualifying is entitled to a gratuity of \$7.50 for each completed period of 30 days of service together with an additional sum of 25 cents for every day of overseas service which falls within such periods. No sum is payable for any day of service over and above the last completed 30 day period.

2. An "ineligible day" is any day of overseas service, rendered after completion of the last 30 day period, for which no additional sum of 25 cents per day is payable.
3. In addition, a supplement is payable for service classed as overseas service equivalent to seven days' pay and allowances, including dependents' allowance and subsistence or lodging and provision allowance at standard Canadian rates for each six months of overseas service and proportionately for a period of less than six months. By regulation, "six months" is considered to mean "183 days".
4. For the purpose of computing benefits under the Act, no period of absence without leave or leave of absence without pay, or time served while undergoing sentence of penal servitude, imprisonment or detention, or period of service in respect of which pay is forfeited is included in determining qualifying service.
